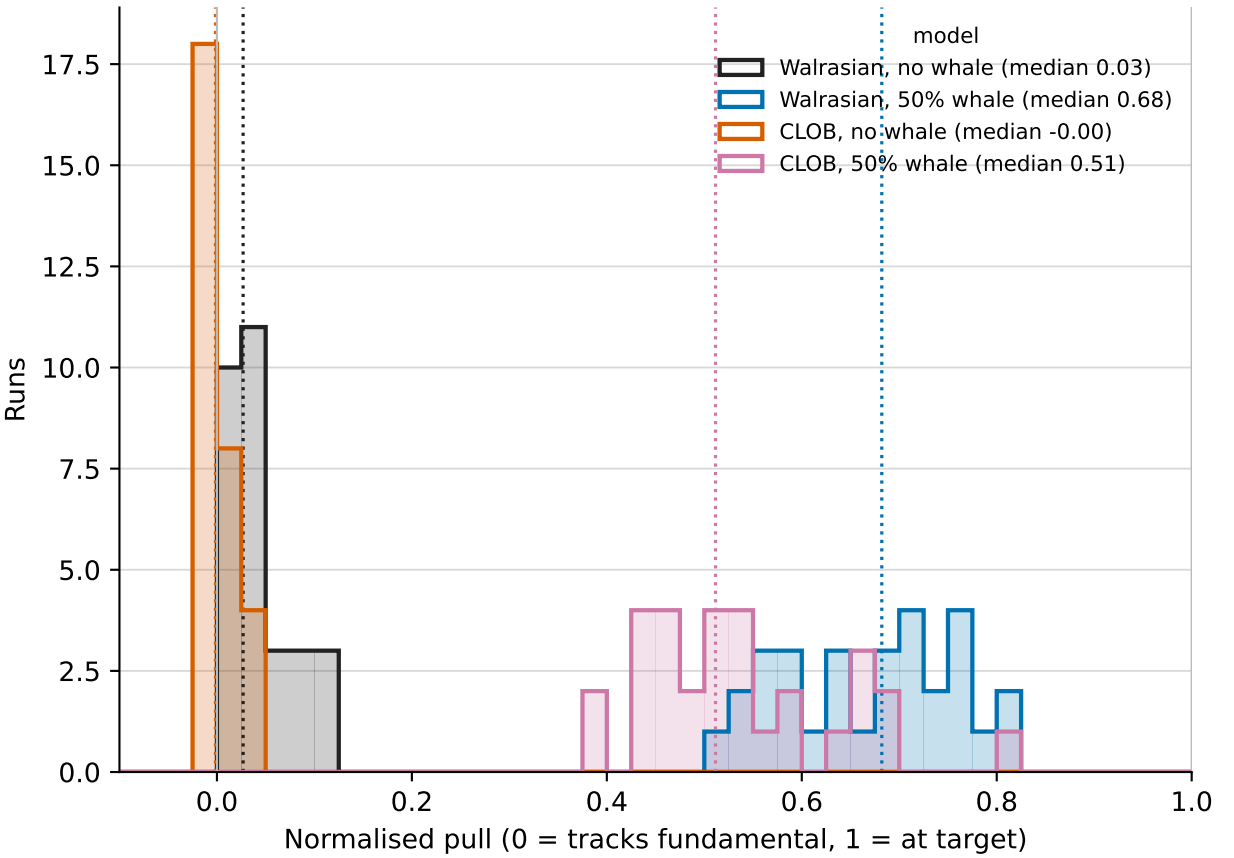
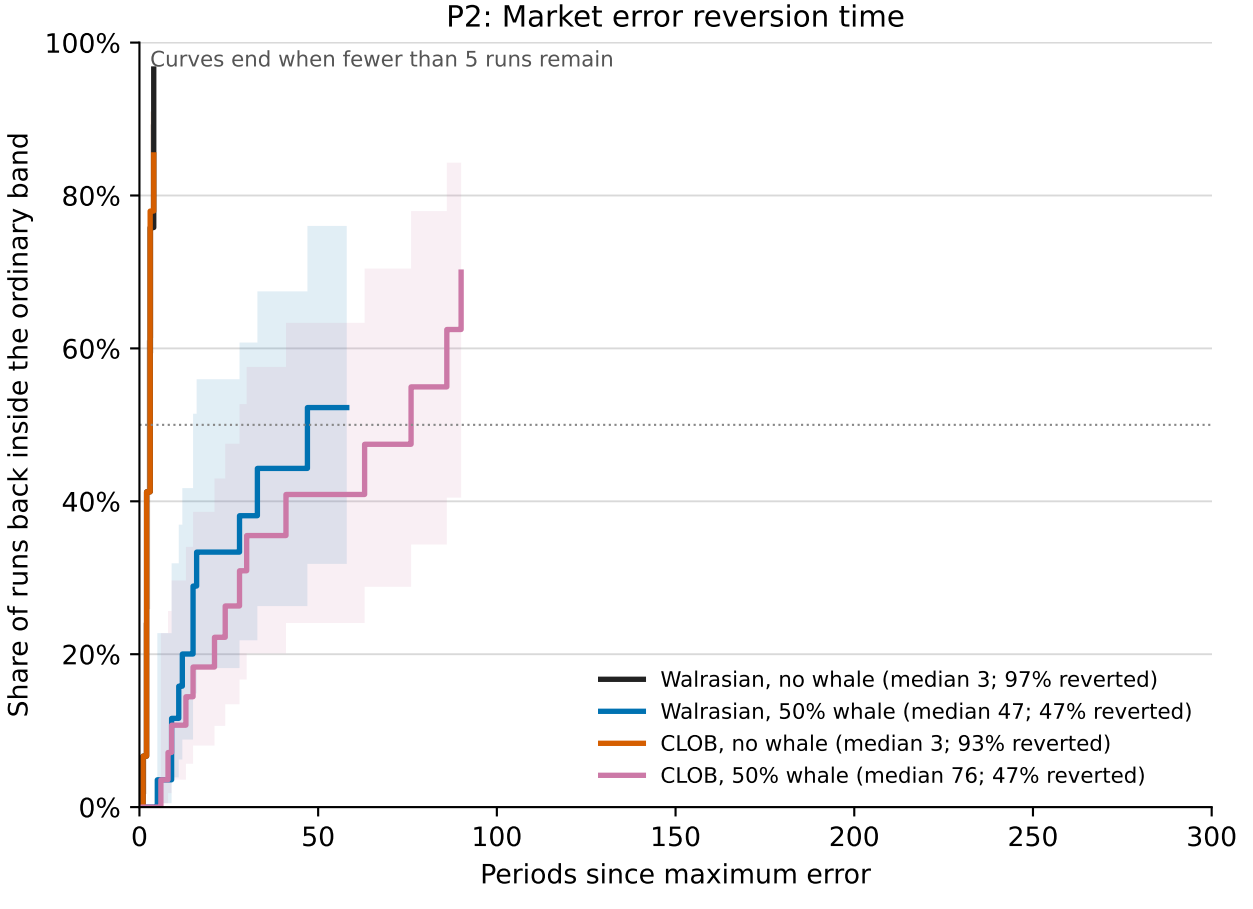
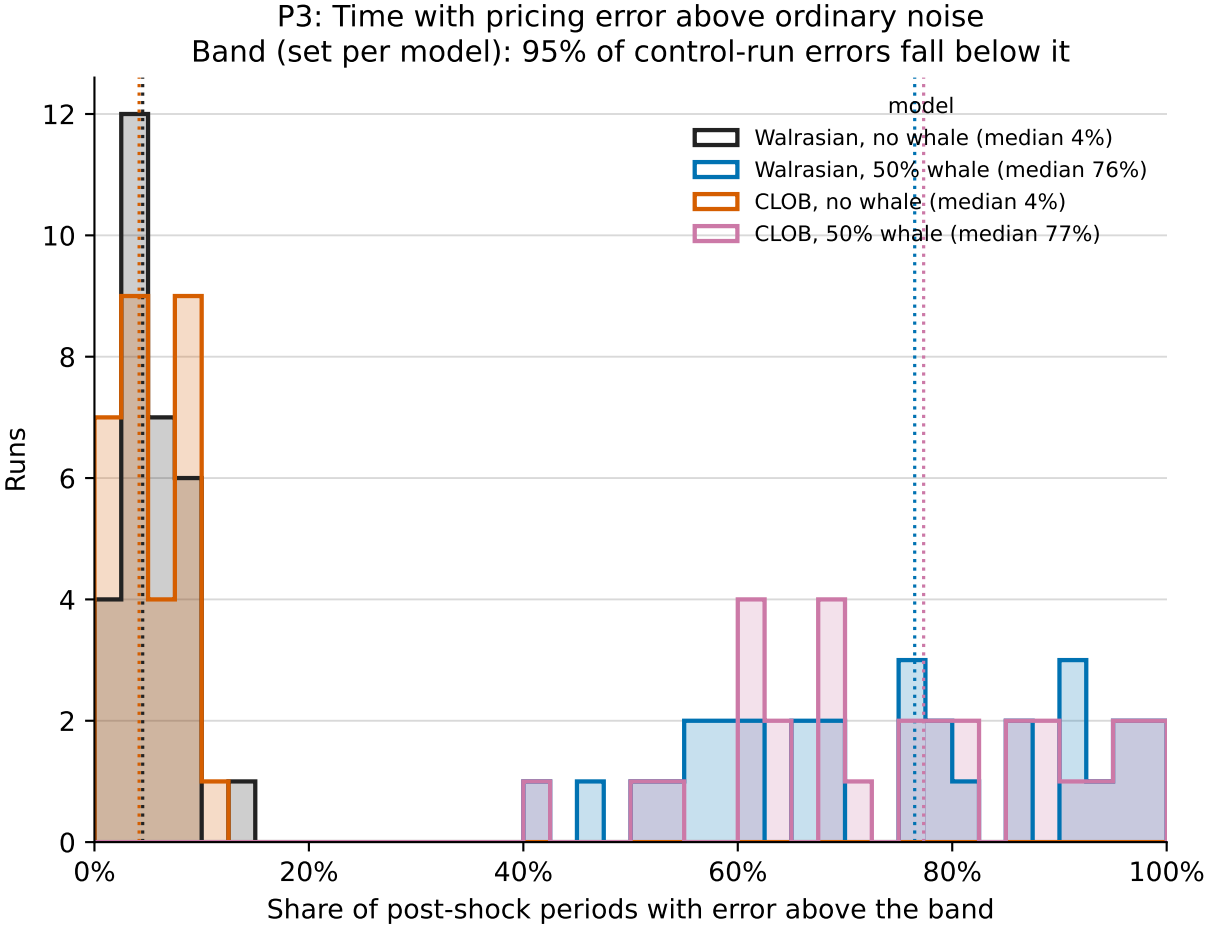
P1: Maximum market error
model
Walrasian, no whale (median 0.13)
Walrasian, 50% whale (median 0.47)
CLOB, no whale (median 0.11)
CLOB, 50% whale (median 0.47)
Ordinary bands
Runs
Maximum market error (probability points)



P1b: Pull toward the whale's valuation
model
Walrasian, no whale (median 0.03)
Walrasian, 50% whale (median 0.68)
CLOB, no whale (median -0.00)
CLOB, 50% whale (median 0.51)
Runs
Normalised pull (0 = tracks fundamental, 1 = at target)



P2: Market error reversion time
Curves end when fewer than 5 runs remain
Walrasian, no whale (median 3; 97% reverted)
Walrasian, 50% whale (median 47; 47% reverted)
CLOB, no whale (median 3; 93% reverted)
CLOB, 50% whale (median 76; 47% reverted)
Share of runs back inside the ordinary band
Periods since maximum error



P3: Time with pricing error above ordinary noise
Band (set per model): 95% of control-run errors fall below it
model
Walrasian, no whale (median 4%)
Walrasian, 50% whale (median 76%)
CLOB, no whale (median 4%)
CLOB, 50% whale (median 77%)
Runs
Share of post-shock periods with error above the band
